EXPERIENCE

Wamo Labs — *Associate Software Engineer*

Sep 2025 - Feb 2026

- **Contributed to Truckpedia, a logistics web application for commodity shipping, by developing scalable backend services in Node.js and optimizing frontend performance in React, reducing unnecessary re-renders and improving load efficiency.**
- **Implemented Redis-based** caching and background job processing using **BullMQ** improving API response times and enhancing system reliability under concurrent traffic.
- **Built modular, reusable UI components and integrated third-party APIs to streamline shipping workflows, improving maintainability and accelerating feature delivery cycles.**
- **Designed and Developed** backend services using **Node.js** for **scalable** web application.

Virtual Taps — *MERN Stack Developer*

Jun 2025 - Oct 2025

- Independently designed and developed a **full-stack loyalty management system** enabling businesses to track customer visits and drive retention through digital rewards.
- Integrated **Apple Wallet passes** with secure token generation for visit validation, ensuring **fraud-resistant** customer check-ins and seamless user experience.
- Implemented **Google Places API** integration to fetch real-time business reviews and profile data, enhancing business credibility and engagement metrics.
- Architected and deployed a scalable **MERN-based** backend with optimized **database queries and caching** strategies to ensure high performance and production stability.

PROJECTS

Job Portal With AI Resume Ranking - FYP — *View*

Designed and developed RESTful backend services using Node.js to manage job postings, candidate applications, and recruiter workflows. Built Python microservices leveraging PyMuPDF for resume parsing and a BERT-based ATS matching algorithm to rank candidates using skill-weighted filtering.Applied strong problem-solving and analytical techniques to design scalable filtering logic for accurate ATS-style evaluation.

Instagram Clone — *View*

Developed a full-stack social media application using Node.js and PostgreSQL, implementing REST APIs for posts,user relationships, and interactions. Designed normalized relational database schemas and optimized SQL queries to efficiently handle dynamic feeds and follow/unfollow relationships. Implemented background job processing with Redis and BullMQ to improve performance and system reliability.

SUMMARY

Software Engineer with strong programming fundamentals and hands-on experience in building scalable full-stack applications using REST APIs, SQL databases (MySQL/PostgreSQL), and modern backend technologies. Experienced in collaborative Git workflows and Agile environments. Passionate about AI-driven systems and problem-solving with a growth mindset.

SKILLS

Programming: JavaScript, C++, OOP, DSA

Frontend: React.js, Next.js, Redux, TypeScript, TanstackQuery, RTK, Performance Optimization

Backend : Node.js, Express.js , MongoDB, JWT, RestfulAPIs, Microservices, Redis, BullMQ, Django/FastAPI

Database: MySQL, PostgreSQL, MongoDB, Relational Schema design, Query Optimization

Version Control: Git, GitHub, Agile workflows

Soft Skills: Problem Solving, Strong communication Team Player, Adaptability, Attention to Detail, Time Management

EDUCATION

VIRTUAL UNIVERSITY

— BS Software Engineering

3.41 | 2023 - 2026

Islamia University of BWP

— BS Artificial Intelligence

3.60 | 2021 - 2023

Certification

1. React Basics
2. Advanced React
3. Programming with JavaScript
4. Introduction to Backend Dev
5. React - The complete Guide
